IDEALPurifi™ ComfortZone Hood

THE IDEALPurifi™ now comes with an optional removable ComfortZone Hood!

The ComfortZone Hood intentionally stratifies the air, keeping the warm and cool air in separate layers.

This is used in warm environments to keep hot air up near the ceiling while redirecting the clean, cool air back down toward the ground, providing workers with a cool breeze and a more pleasant ambient temperature.

The ComfortZone Hood is also recommended for ceiling heights under 16 foot.

IMPROVE

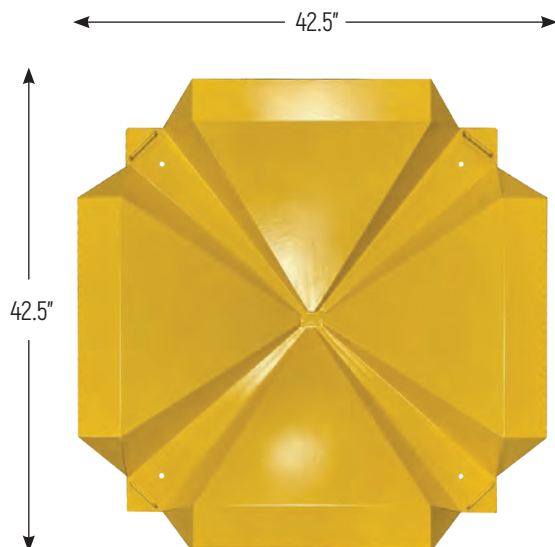

COMFORT

VENTILATION

WORKER MORAL

The results and benefits of the ComfortZone Hood:

- Fresh, clean, breathable, cool air directed back to where it's needed most
- Reduction in temperature and improved air circulation
- Improved employee morale and comfort
- Increased efficiency while reducing downtime and heat related frustrations
- Reduction in dust and particle build on equipment

In the warm summer months when temperatures become uncomfortable, get the most out of your IdealPurifi™ by installing the ComfortZone Hood!

Easily install this air deflector and notice the change in comfort of your industrial space temperature.
